308 ft

MEDIAN NEARBY DEPTH

93 ft

MEDIAN STATIC WATER LEVEL

27 gpm

MEDIAN YIELD

What this means

Wells within 5 miles of this property were drilled between 145 ft and 705 ft deep. The static water level is how far down the water sits once the well is drilled; yield is how fast the well produces. A domestic household typically needs 5–10 gpm. Where a record has been filed, the row links to the official California DWR record.

Estimated cost to drill here

Based on the median nearby well depth of **308 ft** and published per-foot ranges (drilling only \$25–\$65/ft; complete system \$60–\$100/ft, checked 2026-06-11):

- Drilling + casing: **\$7,700 – \$20,020**
- Complete system (pump, tank, hookup): **\$18,480 – \$30,800**

Distances marked ≈ are to the center of the 1-mile survey section the well was filed under, not to the wellhead — DWR placed it there because the filing gave no better location, so the well can sit anywhere in that section, occasionally outside it. The driller's scanned log, linked in each row, describes where the well actually is and often carries the parcel number. Rows with no figures appear last: the state never typed those logs into its database, but the scan has them.

Sources & method

All well records are from the California Department of Water Resources' Well Completion Reports database — the state's official record of water well construction filed by licensed drillers. Distances are computed from

recorded coordinates; location accuracy varies by record (the majority of wells are plotted at the center of the 1-mile Public Land Survey System section they were filed in, per DWR — not the exact wellhead location). Cost ranges apply published per-foot rates to the local median depth and are planning estimates, not quotes. This report is informational only and is not a substitute for a well inspection, water test, or professional advice.
